

Arthroscopic Glenoid Reconstruction With Distal Tibia Allograft and Remplissage Technique

Torgom Abraamyan, Garret Garofolo-Gonzalez, Mark H Getelman¹

¹Southern California Orthopaedic Institute

This video describes a surgical technique for all-arthroscopic glenoid reconstruction with the use of distal tibia allograft and remplissage for recurrent anterior shoulder instability in patients with critical bone loss and an off-track Hill-Sachs lesion. Indications for and outcomes of this emerging technique also are reviewed.
