

Reverse Shoulder Arthroplasty With Latissimus Dorsi Tendon Transfer

Melissa Wright, Taylor Swansen, Anand M Murthi¹

¹Medstar Union Memorial Hosp

This evidence-based technique video discusses the case presentation of a 76-year-old man who underwent reverse shoulder arthroplasty with latissimus dorsi tendon transfer. The video explores the indications for this transfer and introduces the specific patient. The surgical technique is then presented, with specific information on the methods for tendon harvest, transfer, and fixation in the setting of reverse shoulder arthroplasty. The 6-month follow-up results of the patient are presented, and a review of current literature on this technique is provided.
