

Total En Bloc Spondylectomy for Spinal Tumors

Andrew Kim¹, Juan Silva Aponte, Khaled M Kebaish¹

¹Johns Hopkins University

En bloc spondylectomy involves complete tumor resection via a posterior-only approach. En bloc spondylectomy is associated with a decreased rate of local recurrence and a lower risk of tumor-related mortality. Although technically challenging, en bloc spondylectomy is a safe and effective procedure for the surgical management of malignant and aggressive benign spine tumors.
