

Lateral Patellofemoral Ligament Reconstruction

Jacob C. Wochna¹, Shital N. Parikh²

¹Orthopedic Surgery, Wellspan York Hospital, ²CCHMC Orthopaedics

This video describes the clinical evaluation for patients with iatrogenic medial patella instability after lateral retinacular release and the surgical technique for lateral patellofemoral ligament reconstruction with the use of hamstring allograft. It also discusses relevant anatomy, indications, diagnosis, and outcomes associated with the procedure.
